What is the SASSI?

The SASSI is a brief & easily administered psychological screening measure that helps you identify both adult & adolescents who may have a substance use disorder. The SASSI also provides information that is useful in treatment planning. The single page paper & pencil questionnaire (also available in computer and web-based formats) can be administered in individual or group settings.

With over 25 years in development

Backed by Research
Effective Without Raising
Defenses

& research, the SASSI has an empirically tested overall accuracy of 92% for adults & 94% for adolescents.

The SASSI includes subtle questions that have no apparent connection to substance use, allowing identification of individuals with

alcohol & other drug problems even if they do not acknowledge substance misuse themselves.

Who Should attend?

Anyone who needs to screen for alcohol & drug related disorders. The SASSI is used nationwide by substance abuse counselors, educators, medical practitioners, criminal justice professionals, drug court personnel, employee assistance counselors, and therapists.
