

“Qualifications for Test Purchase”

The SASSI-4, SASSI-A3, and Spanish SASSI are carefully developed screening instruments that require proper administration, scoring, and interpretation. Therefore, eligibility to purchase, administer, and/or use these measures is limited to individuals with training and experience in the area of assessment and should be used by:

- Human service practitioners whose certification and/or professional training includes assessment (e.g., psychologists, social workers, certified addictions counselors)

OR

- Individuals who have completed SASSI training that was presented by a certified SASSI trainer.

Individuals who do not have professional training can administer and score the instrument if there is appropriate supervision. *(It is suggested that you contact your state or provincial government for specific information on the laws regulating assessment and testing in your state or province.)*
